

DISPLAY METHOD AND APPARATUS FOR NAVIGATION SYSTEM

Abstract of the Disclosure

5 A display method and apparatus for a navigation system
which is capable of easily and quickly specifying a
destination in the navigation system when using a "Point of
Interest (POI)" method by preventing unwanted POI names or
types from appearing on the navigation system. The method
includes the steps of displaying a POI name list based on an
10 instruction specified by a user, selecting an unwanted POI
name in the POI name list, and removing all POIs having the
unwanted POI name or having the unwanted POI type from the
POI name list. If necessary, the above steps of selecting
the unwanted POI name and removing the unwanted POI names
15 from the POI name list are repeated.
